

Attribute- and relationship syntax extension:

Attributes can have postfixes in their name:

[L]	Language-dependant.
[N]	Multivalued
[T]	Temporal (historicised)

(can appear in any combination)

These attributes violate strict 1 NF and have to be resolved in the data model with detail tables. (with language, period or sequence-nr)

Relationships with [T] are temporal and have to be resolved in the data model with an period-dependent intersection entity.
